JAM 2006

GEOPHYSICS TEST PAPER

IMPORTANT NOTE FOR CANDIDATES

Select any <u>Two</u> Sections. Attempt ALL objective and subjective questions of the same Two Sections. Questions 1- 45 (objective questions) carry <u>three</u> marks each and questions 46 - 66 (subjective questions) carry <u>fifteen</u> marks each.

Write the answers to the objective questions in the Answer Table for Objective Questions provided on page 17 only)

GEOLOGY SECTION

1.	Plutonic	equivale	ent of T	rachyte	is
----	----------	----------	----------	---------	----

- (A) diorite
- (B) gabbro
- (C) granite
- (D) syenite
- 2. The river meanders at the mature stage with gentle gradient. The formation of pointbar will be on:
 - (A) outer zone of the bend
 - (B) inner zone of the bend
 - (C) straight channel segment
 - (D) steep bank of the channel.
- 3. Match the features in **Group 1** with the agents responsible for these features from **Group 2**

Group 1		Grou	2	
P.	Arete	1.	River	
Q.	Backswamp	2.	Ground Water	
R.	Yardangs	3.	Glacier	
S.	Stalactites and stalagmites	4.	Wind	
α_1	.1			

Choose the correct answer from the following:

- (A) P-4, Q-3, R-1, S-2
- (B) P-2, Q-1, R-3, S-4
- (C) P-3, Q-1, R-4, S-2
- (D) P-1, Q-2, R-4, S-3
- 4. The area bounded by two fault planes dipping away from each other with hanging walls going downward is called as:
 - (A) dome
 - (B) grabben
 - (C) horst
 - (D) klippe

5. Match the characteristics in **Group 1** with the structures in **Group 2**

t.com **Group 1** Group 2

Isoclinal fold

Parallel fold

Recumbant fold

Cheveron fold

- P. axial plane is horizontal
- Q. hinges are sharp and angular
- limbs are parallel R.
- S. thickness of bed remains constant
- Choose the correct answer from the following:
- (A) P-2, Q-4, R-2, S-1
- P-1, Q-3, R-2, S-4 (B)
- (C) P-4, Q-2, R-1, S-3
- P-3, Q-4, R-1, S-2 (D)
- 6. Which of the following rock indicates initiation of metamorphism
 - (A) phyllite
 - schist (B)
 - shale (C)
 - (D) slate
- 7. Barrovian metamorphism of pelitic rocks is characterized by the first appearance of index minerals in a particular sequence. Which one of the following is the correct sequence.
 - chlorite-garnet-biotite-kyanite-staurolite-sillimanite (A)
 - (B) garnet-biotite-chlorite-staurolite-sillimanite-kyanite
 - (C) chlorite-biotite-garnet-staurolite-kyanite-sillimanite
 - (D) biotite-chlorite-garnet-kyanite-staurolite-sillimanite
- 8. A crystal has three crystallographic axes of 2 fold symmetry and mirror plane perpendicular to each of these crystallographic axes. The Herman-Manguin notation for crystal would be
 - (A) 2/m 2/m 2/m
 - (B) 2m
 - (C) 2mm
 - (D) 23
- 9. Indicate the correct order in terma of increasing Si: O ratio.
 - (A) phlogopite-beryl-plagioclase-epidote
 - epidote-beryl-phlogopite-plagioclase (B)
 - beryl-phlogopite-plagioclase-epidote (C)
 - (D) plagioclase-phlogopite-epidote-beryl
- 10. Sandstones and purple shales of Muree Series of Potwar region, equivalent to Dagshai and Kasauli beds of northwest Himalaya belongs to
 - (A) Upper Eocene
 - Lower Eocene (B)
 - (C) Middle Miocene
 - (D) Lower Miocene

	A radiogenic isotope has half-life of 1 hour and we have 10000 atoms of that			
partic isotop	ular isotope in a particular system at a particular time. How much atoms of that be will be there after 6 hours?			
(A) (B) (C)	78 156 313			
(D)	625			
Find t	he odd man out from the following			
(A) (B) (C) (D)	stockwork ladder vein saddle reef banding			
Sulfic	Sulfide chimneys are observed at			
(A) (B) (C) (D)	vents of seafloor hotsprings around ridges inland hotspring vents in volcanic terrains sulfide mineral coatings on the chimneys of smelters mouths of explosive volcanoes			
Within the mantle sudden density change produce seismic-wave discontinuities due polymorphic transition or compositional change or a combination of both occur a depth of

- 18. The temperature differences between hot (T_H) and cold (T_C) reservoirs of two Carnot engines A and B are the same. If the ratio of the respective efficiencies, $\frac{\eta^A}{n^B}$, is equal
 - to $\frac{1}{2}$ then the ratio of the hot reservoir temperatures $\frac{T_H^A}{T_H^B}$ is
 - (A) 0.25
 - (B) 0.5
 - (C) 1.0
 - (D) $2 \cdot 0$
- 19. Which one of the following phenomenon cannot be described by the particle nature of electromagnetic radiations.
 - (A) Blackbody radiations
 - (B) Compton scattering
 - (C) Photoelectric effect
 - (D) X-ray diffraction
- 20. If a semiconductor is doped with donor atoms then the impurity levels created in the semiconductor are close to the
 - (A) bottom of the conduction band
 - (B) top of the valence band
 - (C) bottom of the valence band
 - (D) top of the conduction band
- 21. Binding energy per nucleon for the nuclei ⁴He, ⁵⁶Fe, ¹⁹⁷Au and ²³⁵U are given by B₁, B₂, B₃ and B₄ respectively. These binding energies satisfy the order
 - (A) $B_1 < B_2 < B_3 < B_4$
 - (B) $B_1 > B_2 > B_3 > B_4$
 - (C) $B_2 < B_3 < B_4 < B_1$
 - (D) $B_2 > B_3 > B_4 > B_1$
- 22. When a thin transparent sheet is introduced along the path of one of the slits in Young's double slit experiment, then the fringe width
 - (A) decreases
 - (B) increases
 - (C) does not change
 - (D) does not change but intensity becomes half

- 23. An infinite wire, lying along the z-axis, carries a current I in the positive z direction denoted by \hat{k} . The magnetic field at a point $d\hat{i}$ is
 - (A) $\frac{\mu_0 F}{2\pi d} \hat{j}$
 - (B) $\frac{\mu_0 I}{2\pi d}\hat{i}$
 - (C) $-\frac{\mu_0 I}{2\pi d} \hat{j}$
 - (D) $-\frac{\mu_0 I}{2\pi d}\hat{i}$
- 24. The radius of curvature of curved surface of a plano-convex thin lens of glass (refractive index n = 1.5) of focal length 0.4 m is
 - $(A) \quad 0.1 \text{ m}$
 - (B) $0 \cdot 2 \text{ m}$
 - (C) 0.4 m
 - (D) 0.8 m
- 25. The engine of a train, emitting the sound of frequency v_0 approaches an observer with constant speed. If the observer measures the frequencies as v_1 when it is approaching and v_2 while it is going away, the relation between the frequencies is given by
 - (A) $v_1 = v_2 = v_0$
 - (B) $v_1 > v_0 > v_2$
 - (C) $v_1 < v_0 < v_2$
 - (D) $v_1 = v_2 \neq v_0$
- 26. In a dielectric sphere the polarization \vec{P} is given by $\vec{P} = kr^3\hat{r}$. The corresponding bound volume charge density is equal to
 - (A) -20k
 - (B) -10k
 - (C) 10 *k*
 - (D) 20k
- 27. An ideal fluid is flowing through a tube of cylindrical cross section with smoothly varying radius. The velocity of fluid particles at the point where tube's cross sectional area is 1×10^{-4} m² is given by 0.01 m/s. The velocity at a point where cross sectional area is 2×10^{-4} m² is given by
 - (A) 0.0025 m/s
 - (B) 0.005 m/s
 - (C) 0.02 m/s
 - (D) 0.04 m/s

- 28. The solution of Maxwell's equation for electric field in free space is given by $E = E_0 \sin \omega (t x/c)$, where E_0 is a constant, ω is the angular frequency and c is the speed of light. The corresponding solution for the magnetic field B is
 - (A) $B = c E_0 \sin \omega (t x/c)$
 - (B) $B = \frac{E_0}{c} \sin \omega (t x/c)$
 - (C) $B = \frac{E_0}{c^2} \sin \omega (t x/c)$
 - (D) $B = \frac{E_0}{c^3} \sin \omega (t x/c)$
- 29. The frequency of electron in n=1 Bohr orbit is given by f_1 revolutions/s. The frequency of electron in the n-th orbit for n>1 is
 - (A) f_1/n
 - (B) f_1/n^2
 - (C) f_1/n^3
 - (D) $n f_1$
- 30. A signal of 1 mV is input to an amplifier circuit consisting of a transistor in common-emitter mode. What is the voltage gain if the collector current changes by 1 mA and the load resistance is equal to $1 \text{ k}\Omega$?
 - (A) 10
 - (B) 10^2
 - (C) 10^3
 - (D) 10^4

MATHEMATICS SECTION

- 31. Let $\sum_{n\geq 1} a_n$, $a_n > 0$ be a convergent series. Now, consider the following statements:
 - **P**: The series $\sum_{n\geq 1} \sqrt{a_n}$ is always convergent.
 - **Q**: The series $\sum_{n\geq 1} \left(\frac{a_1 + a_2 + \dots + a_n}{n} \right)$ is always divergent.

Then,

- (A) both **P** and **Q** are true
- (B) **P** is true and **Q** is false
- (C) both **P** and **Q** are false
- (D) ${\bf P}$ is false and ${\bf Q}$ is true

32. Let
$$f:[0,1] \rightarrow [0,1]$$
 be defined by $f(x) = \begin{cases} 1 + (x - 1) & \text{if } x \text{ is irrational.} \end{cases}$ if x is irrational.

Then,

- f is continuous and differentiable only at $x = \frac{1}{2}$
- f is continuous only at $x = \frac{1}{2}$ but not differentiable at $x = \frac{1}{2}$
- f is neither continuous nor differentiable at $x = \frac{1}{2}$ (C)
- (D) f is continuous and differentiable for every x = [0,1]
- The value of the integral $\oint_C \frac{dz}{(z-i)^2(z+i)}$, where $C = \{z : |z-i|=1\}$, is 33.
 - (A)
 - (B)
 - (C) $\frac{\pi}{2}i$
 - (D)
- The integral $\int_{0}^{1} \int_{0}^{x} \int_{0}^{y} f(x, y, z) dz dy dx$ is equal to 34.
 - (A) $\int_{0}^{1} \int_{0}^{x} \int_{z}^{x} f(x, y, z) dy dz dx$

- 35. Consider the initial value problem (IVP): xy'-y=0, y(0)=0. Now, consider the following statements: O **CO**
 - **P**: Picard's theorem is applicable to the above IVP.
 - **Q**: The above IVP has exactly one solution.

Then,

- (A) both **P** and **Q** are true
- (B) **P** is false but **Q** is true
- (C) both P and Q are false
- (D) **P** is true but **Q** is false
- 36. Let O be the set of rational numbers in \Re . Then
 - (A) Q is closed in \Re
 - (B) Q is open in \Re
 - (C) Q is both open and closed in \Re
 - (D) Q is neither open nor closed in \Re
- 37. The radius of convergence of the power series $\sum_{n\geq 0} \frac{(n!)^2}{(2n)!} x^{2n}$ is
 - $(A) \qquad \frac{1}{2}$
 - (B) $\frac{1}{\sqrt{2}}$
 - (C) $\sqrt{2}$
 - (D) 2
- 38. Consider the differential equation y'' + 6y' + 25y = 0 with initial condition y(0) = 0. Then, the general solution of the IVP is
 - (A) $e^{-3x}(A\cos 4x + B\sin 4x)$
 - (B) $B e^{-3x} \sin 4x$
 - (C) $A e^{-4x} \sin 3x$
 - (D) $e^{-4x}(A\cos 3x + B\sin 3x)$
- 39. Let $\vec{F}(x, y, z) = x^2 y \hat{i} + y \hat{j} + z^2 \hat{k}$. If $\vec{p} = curl \vec{F}$ and $\vec{q} = div \vec{F}$, then (\vec{p}, q) is
 - (A) $(-x^2 \hat{k}, 1+2xy+2z)$
 - (B) $(2xy\hat{i}+\hat{j}+2z\hat{k}, 1+2xy+2z)$
 - (C) $(-x^2 \hat{k}, x^2 y + y + z^2)$
 - (D) $(2xy\hat{i}+\hat{j}+2z\hat{k}, x^2y+y+z^2)$

40. Let $V = \{ (x, y, z, w) : x+y+z-3w = 0, x-y+z-w = 0, x-7y+z+5w = 0 \}$

be a vector subspace of \Re^{4} . Then $\dim(V)$ is logspot.com

- (B)
- 3 (C)
- (D)
- Let $T: \mathbb{R}^3 \to \mathbb{R}^3$ be a linear transformation defined by 41. T(x, y, z) = (x+y+z, y+z, z). Then $T^{n}(x, y, z)$, for $n \ge 1$, is

(A)
$$\left(x+ny+\frac{n^2+n}{2}z, y+nz, z\right)$$

(B)
$$\left(x+n\ y+(n^2-n+1)\ z,\ y+n\ z,\ z\right)$$

(C)
$$\left(x+ny+\frac{n^2+5n-2}{4}z, y+nz, z\right)$$

(D)
$$\left(x+ny+\frac{3n^2-n+2}{4}z, y+nz, z\right)$$

- Suppose that the moment generating function of a random variable X is 42. $\frac{1}{2}e^{-3t} + \frac{1}{4}e^{-2t} + \frac{1}{4}e^{2t}$. Then Var(X) is
 - (A)
 - (B)
 - (C)
 - (D)
- Perform Newton's method to the equation $x^3 x 2 = 0$ starting with $x_0 = 1$. In this 43. operation, the value of x_2 (the second iterate) is
 - (A)
 - (B)
 - $\frac{18}{11}$ (C)
 - (D)

44. The distribution function F of a random variable X is

http://isbiggfeal.blogspot.com

$$F(x) = \begin{cases} 1/4, & \text{if } 0 \le x < 1 \\ 1/2, & \text{if } 1 \le x < 2 \\ 1, & \text{if } x \ge 2. \end{cases}$$

- (A) $\left(\frac{3}{8}, \frac{3}{8}\right)$
- (B) $\left(\frac{1}{8}, \frac{3}{8}\right)$
- (C) $\left(\frac{3}{8}, \frac{7}{8}\right)$
- (D) $\left(\frac{1}{8}, \frac{1}{4}\right)$
- 45. Let $X_1, X_2, X_3, \dots, X_n$ be a random sample from a normal population $N(\mu, \sigma^2)$, where μ and σ^2 are unknowns. Suppose that $S^2 = \frac{1}{n-1} \sum_{i=1}^n (X_i \overline{X})^2$, where \overline{X} is the sample mean. It is known that cS^2 follows a χ^2 -distribution with (n-1) degrees of freedom. Then c is equal to
 - (A) $\frac{n}{\sigma}$
 - (B) $\frac{n}{\sigma^2}$
 - (C) $\frac{n-1}{\sigma}$
 - (D) $\frac{n-1}{\sigma^2}$

GEOLOGY SECTION

- 46. (a) What is the relationship between an earthquake focus and the corresponding epicenter? (6)
 - (b) What are the three kinds of Plate margins and associated magmatism? (9)
- 47. (a) What is dip slip fault? In an area a bed is dipping towards west at 42°. The area had been affected by fault dipping toward east at 45°. With the help of neat diagrams show the relative movements of the blocks resulting in repetition of bed and and omission of bed (9)

	(b) htt	How you define monocline? A N-S trending bed is exposed on an sloping ground with the bed-dipping west. Find the thickness of the bestope of the ground is 15° E; width of the bed measured perpendicular to 100 m; dip of the bed is 30°W. (6)	ed, if the
48.	(a)	Why startovolcano like Mount Fuji in Japan has steep sides and shield like Mauna Loa in Hawaii have gentle surface slopes?	(6)
49.	(b) (a)	How you define conformable and unconformable sequence? What go events are indicated by angular unconformity? Where do back-arc basins form and what is the necessary conditions formation of back-arc basins? How is the nature of magmatism different to fa forearc?	(9) for the
	(b)	Compare Airy's and Pratt's hypothesis on isostasy with the help of a neat	diagram. (6)
50.	(a)	Distinguish between "perthitic" and "rapakivi" texture with the help sketch.	(6)
	(b)	Give the idealized Bouma sequence. Where do you find such a sequence deposition of sediments?	uence of (9)
51.	(a)	Mention the broad tectonic regime and mode of occurrence of porphyry-deposits.	-copper (6)
	(b)	Mention 3 locality of each of occurrences of Iron, Manganese and Copper in India.	deposits (9)

59.

60.

(9)

- 61. (a) Let $f:[0,1] \to \Re$ be continuous with $\int_0^x f(t) dt = \int_x^1 f(t) dt$ for all $x \in [0,1]$. Does the above condition imply that $f(x) \equiv 0$ on [0,1]? Explain.
 - (b) Let $f:[0,1] \to \Re$ be defined by $f(x)=x^3$. Find the area of the surface generated by revolving the curve y=f(x) about the x-axis. (9)
- 62. (a) Let $f(x)=1+3x^2+5x^4+7x^6+\cdots$, for |x|<1, be a power series. Determine $f\left(\frac{1}{2}\right)$.
 - (b) Let V be a vector subspace of \Re^4 spanned by the vectors (1,1,1,-1) and (1,-1,0,1). Let W be another vector subspace of \Re^4 spanned by the vectors (1,1,-1,1) and (1,3,4,-5). Determine a basis for $V \cap W$.
- 63. (a) Consider the system of linear equations

$$x + y + z = 3$$

$$x + 2y + 3z = a$$

$$x + 3y + bz = 5.$$

Determine the values for a and b for which the above system has a unique solution, infinite number of solutions, and no solution. (9)

- (b) Solve: $(4x^2y+5x^3y^2) dx + (2x^3+3x^4y) dy = 0$.
- 64. (a) Let C be the boundary of the triangle with vertices (0,1,0), (1,0,0) and (2,1,0). If $\overrightarrow{F}(x,y,z) = -y\hat{i} + y^2z\hat{j} + zx\hat{k}$, then use Stoke's theorem to evaluate $\int_C \overrightarrow{F} \cdot d\overrightarrow{r}$ when C is traversed counter-clockwise when viewed from above.
 - (b) Let $u(x, y) = x^3 3xy^2 + x + 3$ be the real part of an analytic function f(x, y) on the entire complex plane. Determine the harmonic conjugate of u(x, y).
- 65. (a) Let $X_1, X_2, X_3, \dots, X_{20}$ be a random sample of size 20 from a normal population $N(0, \sigma^2)$. Find the best critical region of size $\alpha = 0.05$ for testing $H_0: \sigma^2 = 1$ against $H_1: \sigma^2 = 2$. (9)

[Given: $\chi_{20}^2(0.95) = 31.4$, $\chi_{19}^2(0.95) = 30.1$, $\chi_{20}^2(0.05) = 10.9$, and $\chi_{19}^2(0.05) = 10.1$]

(b) Let $X_1, X_2, X_3, \dots, X_n$ be a random sample of size n from a normal population $N(\mu,16)$. Compute the minimum integral value of n such that $P(\overline{X}-2 < \mu < \overline{X}+2) \ge 0.95$, where \overline{X} is the sample mean. (6)

[For $Z \sim N(0,1)$ and $\Phi(z) = P(-\infty < Z < z)$, $\Phi(1.645) = 0.95$ and $\Phi(1.96) = 0.975$]

66. (a) Determine the value of c so that $f(x, y) = c(x^2 - y^2)$, for $(x, y) \in S$ pot composition $f(x, y) \in S$ otherwise,

where D is the triangle with vertices (0,0), (2,0) and (2,2), is the joint probability density function of the random variables X and Y.

(b) The table below gives the values of f(x) for $1 \le x \le 9$.

х	1	3	5	7	9
f(x)	1	0	1	0	1

Compute the forward difference table and determine f(2) up to four decimal places. (9)
