### Assistant Agricultural Officer

**Passage:**

Read the following passage and answer the questions below

The Indian economy rests on agricultural base and for decades and generations the picture that India presented to the world was one of famine and of an unchanging peasantry reluctant to depart from the cultural practices handed down to them by their forefathers. Indian agriculture, it was said was a gamble on the rains. Some visionaries and civil servants had sought to change all this. Their experiments at rural transformation were watched with amused interest and if their efforts did not meet with more than temporary and isolated success, it was because they were operating individuals and in very limited areas within what was basically an inhospitable and unresponsive administrative environment. The scale of effort was enlarged during the Second World war with the launching of the "grow more food campaign." But, the administrative structure remained largely unaltered.

It was to change all this, that the Community Development Programme was introduced. There were three problems that had to be tackled. First, if the farmer was to change methods, he had to be educated to see the possibility to change through actual demonstration in his field at no cost to himself. If the farmer tilled the land in the same manner as his father before him, it was because tradition had no optimised risks and the farmer had no margin on the basis of which to gamble on strange new practices and risk not merely a financial loss but his very survival. Second, there was no one agency to whom the farmer could turn for assistance or advice. If he wanted better seeds, he had to go to the Agriculture Department. For irrigation he had to knock at the doors of the Irrigation Department. Roads were the responsibility of the Public Works Department. Land problems had to be taken up with the revenue authorities and so on. In short, the administration was totally fragmented at the point which touched the life of the farmer. Coordination was difficult and the totality of the farmer's problem could never be adequately comprehended, let alone ameliorated, by the administration. Third, even if the administration sought to promote rural transformation and the farmers were willing, how was the new knowledge to be transmitted not merely to every village but to each cultivator?

The Community Development Programme sought to provide answers to these three problems. Something in the nature of the single-line administration was established under a chain of command running through the District Development Officer and Block Development Officer to the multipurpose village-level worker. Instead of having to go to several departments to get anything done, the farmer could now deal with a single community development authority with which all the executive agencies involved in rural development were associated. The many thousands of field demonstrations laid out under the Community Development Programme demonstrated the possibility of change in a manner that carried conviction and at no risk to the peasant. Once the farmer was persuaded, his alleged age-old conservatism vanished and the next problem was to satisfy his evergrowing demands. Meanwhile, the establishment of a National Extension Service first time created a permanent transmission system for the propagation and demonstration of new ideas and methods, not just in isolated pockets, but over very wide areas.

- (d) the changes as demonstrated were all familiar to farmers

**Passage:**

Read the following passage and answer the questions below

There was an old weaver in a village, who had been praying to Lord Shiva for the last twenty-five years to give them enough money to live in comfort. Each morning and evening, he would walk round the Shiva temple one hundred and one times, prostrate himself before the image and then come back home. In spite of having prayed for such a long period, there was no sign of wealth coming to him. He, however, never lost faith in God and waited for the time to come.

As time passed, the poor weaver grew old. It was difficult for him to go round and round the temple and he was to help himself through a stick to walk. Lord Shiva did hear the weaver's prayer but did nothing to help him. However, Parvati, Shiva's wife, felt sorry at this and spoke to her husband. "Why are you so hard on that old weaver who had been who has been worshipping you for such a long time? He is grown so old now that he cannot even walk properly. Why don't you make life easier for him?" Shiva smiled and replied to Parvati, "Do you think I would have refused to give him wealth if he could make use of it? What can I do for someone who is not destined to be rich?" Parvati, however, was not convinced with the view that a man cannot make use of wealth if it is given to him.

One day both Shiva and Parvati came down to earth and went to that temple. Shiva put a pot of gold on the way of the weaver when he was taking a round of the temple so that he can pick it up. The weaver walked on. "Oh, my Lord", he prayed, "How long have I to continue this wretched life? You have not been kind enough to me. But I can still play my trade. My eyes are still good. How fortunate I am that even in my old age I can still weave well." Then a terrible thought struck the weaver. "Suppose I were to lose my eyesight. But still I would be able to walk round the temple. Let me try. I could walk like this." He firmly closed his eyes and walked on. He passed by the pot of gold with his eyes closed. He smiled when he opened his eyes. "Yes," he said, "I need not worry. Even if i become blind, I can still walk round the temple." The weaver then went home. Shiva looked at Parvati and said, "But there is something I can do for him. He will not lose all interest in wealth. He will be very happy."

**Passage:**

Study the following information carefully and answer the questions given below:

The Central Government reportedly wants to continue providing subsidy to consumers for cooking gas and kerosene for five more years. This is not good news from the point of view of reining in the fiscal deficit. Mounting subventions of subsidies means diversion of savings by the government from investment to consumption, raising the cost of capital in the process. The government must cut expenditure on subsidies to create more fiscal space for investment in both physical and social infrastructure. It should outline a plan for comprehensive reform in major subsidies including food, fertilizers, and petroleum products.
